The challenge

90%

energy output expected to be generated from renewable solutions by 2050

65%

of global GDP is under a 2050 net-zero commitment

70%

global emissions covered by National Net Zero pledges, in order to reach net zero by 2050 (International Energy Agency)

73%

companies prioritize taking responsibility for climate change (Nielsen)

68%

carbon offset demand rise expected by 2030. Voluntary-driven environmental finance boom led by carbon neutral and SBTi investment (Trove Research)

\$125 trillion

investment in low carbon technology and infrastructure required to reach net zero by 2050

A force for good

Our commitment to change the legacy

We are empowering corporations to address the most important environmental challenges and contribute positively to the environment. Broad scientific and institutional consensus is that inaction or delay are not an option. We are the last generation that can act to save the planet from global warming.

Locations

With global presence and environmental project partners across continents, our services have a genuine global reach and impact.
